

Ambulatory Referral for Covid Antibody Infusion Therapy

Place a referral order for Covid Antibody Infusion Therapy using the Visit Taskbar (ADD ORDER).

1. Click in the **Add Order** field on the **Visit Taskbar**, type 'ref covid antibody' and press **Enter**.

The screenshot shows the 'Visit Taskbar' in Epic. On the left, there are sections for 'SINCE LAST NEMG INTERNAL MEDICINE VISIT' and 'HEALTH MAINTENANCE'. The 'ADD DX' field is highlighted with a red box and contains the text 'ref covid antibody'. To the right of this field is a '+ ADD DX (1)' button.

2. Double-click to select the **Ambulatory referral to Covid Antibody Infusion Therapy** referral order.

The screenshot shows the 'Order Search' window. The search term 'REF COVID ANTIBODY' is entered. Under the 'After Visit Procedures' section, the order 'Ambulatory referral to Covid Antibody infusion Therapy' is highlighted with a red box. The order details show 'REF250 Referral AMB Y REF FA...'. At the bottom, there are buttons for 'Select And Stay', 'Accept', and 'Cancel'.

3. Click on the name of the order to complete the screening questions.

The screenshot shows the order details window. The order 'Ambulatory referral to Covid Antibody Infusion Therapy' is highlighted with a red box. Below the order name, it says 'Internal Referral, Routine, Specialty Services Required'. At the bottom, there are buttons for 'PRINT AVS', 'PEND', and 'SIGN ORDERS (1)'.

4. Complete the screening questions and click **Accept**.

The screenshot shows the screening questions for the 'Ambulatory referral to Covid Antibody infusion Therapy' order. The questions are:

- Are you referring an outpatient for an infusion of a monoclonal antibody (i.e. bamlanivimab or casirivimab/medevimab) to treat mild to moderate COVID-19? (Yes/No)
- Has patient tested positive for Covid in the last 7 days? (Yes/No)
- Is the patient 75 years old or older? (Yes/No)
- Patient is between 12-17 years of age (Yes/No)
- Patient has one or more of the following comorbidities:
 - Chronic Kidney Disease, Stage III or higher or receiving dialysis
 - Congestive Heart Failure NYHA Class III or higher
 - COPD with continuous home oxygen
 - Pulmonary hypertension or pulmonary fibrosis** (checked)
 - Cystic fibrosis
 - S/P stem cell transplant
 - Active chemotherapy for acute leukemia, lymphoma, or myeloma
 - S/P solid organ transplant
 - Receiving or have received lymphocyte depleting monoclonal antibody therapy (e.g., rituximab, ofatutu ...)
 - Parkinson's disease
- Attest the patient meets criteria for monoclonal antibody therapy, provided medication-specific education, obtained verbal consent for the infusion, and informed the patient to expect a call from YNHHS scheduling for date/time of the infusion. (Yes/No)

 There are several red boxes with annotations:

- 'Answer these initial screening questions first. Based on the answers, additional criteria questions will display.'
- 'This attestation is required and states that you've provided education, obtained verbal consent and told the patient to expect a call from scheduling to schedule their infusion.'
- 'Select the infusion department/location where you want the patient to receive the medication.'

 At the bottom, there are buttons for 'Accept' and 'Cancel'.
