COVID-19 Pediatric Home Management Program
Does not substitute for clinical judgement of licensed professional

START: MD/APC evaluation video visit - Known Positive pt outreach or pt initiated. Symptoms are Mild, Moderate, or Severe?

- Healthy Child >3m w/ Mild Symptoms:
  - Mild Symptoms URI:
    - No work of breathing, well hydrated

- Care Plan:
  - Reassure patient and family
  - Self monitor per CDC
  - Follow home isolation per Pediatric Office Triage Guideline, 14 days and 3 days after symptom resolution
  - Minimum: Follow up call 24-48 hrs and then 3-4 days later
  - Call back for fever or worsening symptoms for reassessment

- Pt has Moderate/Severe Symptoms or worsening symptoms or child w/ mild symptom and underlying condition

- MD/APC evaluation video visit

- For otherwise healthy children > 3m of age w/ moderate symptoms:
  - Examples include not limited to:
    - Mild work of breathing
    - Well-hydrated
    - Coughing a lot
    - Prolonged fever
    - Moderate/Severe pain
  - Care Plan (in addition to interventions for mild symptoms):
    - F/U phone calls/telehealth visits may be more frequent based on risk assessment and patient needs
    - Consider home O2 sat monitoring if available
    - Monitor for dyspnea, cough, fever eg. progression to severe
    - Monitor hydration
    - Follow home isolation per Pediatric Office Triage Guideline
    - If symptoms worsen, consider ED evaluation and/or Lab/Imaging

- Symptom worsening?

- Pt has Severe Symptoms

- Needs urgent office assessment or ED and evaluation for hospital admission
  - Call before sending to inform COVID-19 suspect
  - If ambulance needed must inform COVID-19 suspect

- D/C from ED/Hosp
  - F/U with patient 24-48 hrs after discharge

- Final clinical assessment to confirm resolution of illness/isolation protocol complete.
