Assumptions Defined: Daily Burn Rate: Rolling 7 day average of volume of products brought to the patient care areas from the warehouse or from our distributor. Current DOH (days-on-hand): Current warehouse inventory divided by daily burn rate. The numerator does not include products in our pipeline or products held by our distributor that are earmarked for YNHHS. If 0 Replenishment, Days Until: Predictive analytic that is a function of current inventory and projected future burn rates that are determined as a function of projected COVID patient volume. Swabs/Kits: Based on information provided by the laboratory.
