Dear Patient:

Your clinician has requested testing for the novel coronavirus disease (COVID-19).

You will be contacted by a representative of the hospital to schedule your appointment. Your appointment will be scheduled at a location most convenient for you.

Please arrive at the time you are given. Bring photo identification with you. When you arrive at the specimen collection station, you will be greeted by a staff member who will verify your photo identification and your appointment time.

You will proceed through the line where your information will be again verified, and the specimen will be collected.

For the specimen collection, you will have a small swab placed deep in your nose and a second swab may be placed in your mouth. Swabbing for nasal specimens may be uncomfortable for 15 seconds. Please bring a tissue to blow or wipe your nose.

The specimen can be taken in your vehicle in most cases. However, if this is not possible, you will be asked to exit your vehicle and sit in a chair to have the specimen collected. You may stand for the test if you would like.

The person collecting the sample will be wearing protective attire. He or she will perform hand hygiene as well as change gloves and disinfect the examination seat in between each patient.

Results: You can expect your results within 5 days or sooner on My Chart.

While you wait for your results, there are some important things for you to know:

You are being tested for COVID-19 so you must assume you are positive until you are called with your results. This means:

- Remain isolated, by yourself, in your room until you get a call with your results. If you need to leave the room wear a mask.
- Keep a distance of at least 6 feet from other people at all times.
- Ask a family member to shop or get groceries. Do not leave your home.
- Disinfect surfaces that are shared by other family members (door handles, faucets, refrigerator door handle and TV remotes, for example.)
- Please cover your nose and mouth when sneezing or coughing and then wash your hands.
- Wash your hands frequently with soap and water or hand sanitizer that has at least 60% alcohol.
- Even if you are feeling well, do not to leave your home except for medical emergencies or to pick up medications.
- If you need medical care, please CALL AHEAD to let them know that you are waiting for a COVID-19 test or that you have COVID-19 to see if the visit can be done by telephone or postponed.
- If you need to enter any medical setting (such as the ER or a doctor’s office) you must bring and wear a mask.

Call your doctor with any questions or reach out to the COVID-19 Call Center at 203-688-1700 (7 am - 7 pm).
Steps to help prevent the spread of COVID-19 if you are sick

FOLLOW THE STEPS BELOW: If you are sick with COVID-19 or think you might have COVID-19, follow the steps below to help protect other people in your home and community.

Stay home except to get medical care
- **Stay home:** Most people with COVID-19 have mild illness and are able to recover at home without medical care. Do not leave your home, except to get medical care. Do not visit public areas.

- **Stay in touch with your doctor.** Call before you get medical care. Be sure to get care if you have trouble breathing, or have any other emergency warning signs, or if you think it is an emergency.

- **Avoid public transportation:** Avoid using public transportation, ride-sharing, or taxis.

Separate yourself from other people in your home, this is known as home isolation
- **Stay away from others:** As much as possible, stay away from others. You should stay in a specific “sick room” if possible, and away from other people in your home. Use a separate bathroom, if available.

Call ahead before visiting your doctor
- **Call ahead:** Many medical visits for routine care are being postponed or done by phone or telemedicine.

  - If you have a medical appointment that cannot be postponed, call your doctor’s office, and tell them you have or may have COVID-19. This will help the office protect themselves and other patients.

If you are sick wear a facemask in the following situations, if available.
- **If you are sick:** You should wear a facemask, if available, when you are around other people (including before you enter a healthcare provider’s office).

- **If you are caring for others:** If the person who is sick is not able to wear a facemask (for example, because it causes trouble breathing), then as their caregiver, you should wear a facemask when in the same room with them. Visitors, other than caregivers, are not recommended.

Note: During a public health emergency, facemasks may be reserved for healthcare workers. You may need to improvise a facemask using a scarf or bandana.

Cover your coughs and sneezes
- **Cover:** Cover your mouth and nose with a tissue when you cough or sneeze.

  - **Dispose:** Throw used tissues in a lined trash can.

  - **Wash hands:** Immediately wash your hands with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.

Clean your hands often
- **Wash hands:** Wash your hands often with soap and water for at least 20 seconds. This is especially important after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.

  - **Hand sanitizer:** If soap and water are not available, use an alcohol-based hand sanitizer with at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.

  - **Soap and water:** Soap and water are the best option, especially if hands are visibly dirty.

  - **Avoid touching:** Avoid touching your eyes, nose, and mouth with unwashed hands.

Avoid sharing personal household items
- **Do not share:** Do not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people in your home.

  - **Wash thoroughly after use:** After using these items, wash them thoroughly with soap and water or put in the dishwasher.

cdc.gov/coronavirus
Clean all “high-touch” surfaces everyday

Clean high-touch surfaces in your isolation area (‘sick room’ and bathroom) every day; let a caregiver clean and disinfect high-touch surfaces in other areas of the home.

• **Clean and disinfect:** Routinely clean high-touch surfaces in your “sick room” and bathroom. Let someone else clean and disinfect surfaces in common areas, but not your bedroom and bathroom.
  - If a caregiver or other person needs to clean and disinfect a sick person’s bedroom or bathroom, they should do so on an as-needed basis. The caregiver/other person should wear a mask and wait as long as possible after the sick person has used the bathroom.

• **High-touch surfaces include phones, remote controls, counters, tabletops, doorknobs, bathroom fixtures, toilets, keyboards, tablets, and bedside tables.**

• **Clean and disinfect areas that may have blood, stool, or body fluids on them.**

• **Household cleaners and disinfectants:** Clean the area or item with soap and water or another detergent if it is dirty. Then, use a household disinfectant.
  - Be sure to follow the instructions on the label to ensure safe and effective use of the product. Many products recommend keeping the surface wet for several minutes to ensure germs are killed. Many also recommend precautions such as wearing gloves and making sure you have good ventilation during use of the product.
  - Most EPA-registered household disinfectants should be effective. A full list of disinfectants can be found hereexternal icon.

Monitor your symptoms

• **Common symptoms of COVID-19 include fever and cough. Trouble breathing is a more serious symptom that means you should get medical attention.**

• **If you are having trouble breathing, seek medical attention, but call first.**
  - Call your doctor or emergency room before going in and tell them your symptoms. They will tell you what to do.

• **Wear a facemask:** If available, put on a facemask before you enter the building. If you can’t put on a facemask, cover your coughs and sneezes. Try to stay at least 6 feet away from other people. This will help protect the people in the office or waiting room.

• **Follow care instructions from your healthcare provider and local health department:** Your local health authorities will give instructions on checking your symptoms and reporting information.

In all cases, follow the guidance of your healthcare provider and local health department. The decision to stop home isolation should be made in consultation with your healthcare provider and state and local health departments. Local decisions depend on local circumstances.

How to discontinue home isolation

• **People with COVID-19 who have stayed home (home isolated) can stop home isolation under the following conditions:**
  - **If you will not have a test** to determine if you are still contagious, you can leave home after these three things have happened:
    - You have had no fever for at least 72 hours (that is three full days of no fever without the use medicine that reduces fevers) AND
    - other symptoms have improved (for example, when your cough or shortness of breath have improved) AND
    - at least 7 days have passed since your symptoms first appeared
  - **If you will be tested** to determine if you are still contagious, you can leave home after these three things have happened:
    - You no longer have a fever (without the use medicine that reduces fevers) AND
    - other symptoms have improved (for example, when your cough or shortness of breath have improved) AND
    - you received two negative tests in a row, 24 hours apart. Your doctor will follow CDC guidelines.

In all cases, follow the guidance of your healthcare provider and local health department. The decision to stop home isolation should be made in consultation with your healthcare provider and state and local health departments. Local decisions depend on local circumstances.
